

BHARTIYA INSTITUTE OF ENGINEERING & TECHNOLOGY-SIKAR

MOBILE APPLICATION DEVELOPMENT LAB MANUAL (6CS4-24) SEM-VI CSE

PREPARED BY: DILEEP KUMAR AGARWAL

LIST OF EXPERIMENT:

1. To study android studio and its installation. Create “Hello World” application.
2. To understand activity, Intent, Create sample application with login module.
3. Design simple GUI application with activity and Intents e. g. calculator.
4. Write an application that draws basic graphical primitives on the screen.
5. Create an android app for database creation using SQLite database.
6. Develop an application that makes use of RSS Feed.
7. Develop a native application that uses GPS location information.
8. Implement an application that writes data to the SD card.
9. Design a gaming application.
10. Write a mobile application that creates alarm clock.

Ex. No : 1

To study android studio and its installation. Create “Hello World” application.

Simple application to change font size and color of text view

1) Open eclipse or android studio and select new android project

2) Give project name and select next

3) Choose the android version. Choose the lowest android version (Android 2.2) and select next

4) Enter the package name. Package name must be two word separated by comma and click finish

5) Go to package explorer in the left hand side. Select our project.

6) Go to res folder and select layout. Double click the main.xml file

7) Now you can see the Graphics layout window.

8) Click the main.xml file and type the code below

Code:

```
<?xml version="1.0" encoding="utf-8"?>
```

```
<LinearLayout
```

```
xmlns:android="http://schemas.android.com/apk/res/android"
```

```
android:layout_width="fill_parent" android:layout_height="fill_parent"
```

```
android:orientation="vertical" >
```

```
<TextView
```

```
android:id="@+id/textView1"
```

```
android:layout_width="match_parent"
```

```
android:layout_height="wrap_content"
```

```
android:layout_margin="20sp"
```

```
android:gravity="center"
```

```
android:text="HELLO WORLD"
```

```
android:textSize="20sp"
```

```
android:textStyle="bold" />
```

```
<Button
```

```
android:id="@+id/button1"
```

```
android:layout_width="match_parent"
```

```
android:layout_height="wrap_content"
```

```

android:gravity="center"
android:text="Change font size"
android:textSize="20sp" />
<Button
android:id="@+id/button2"
android:layout_width="match_parent"
android:layout_height="wrap_content"
android:gravity="center"
android:text="Change color"
android:textSize="20sp" />
<Button
android:id="@+id/button3"
android:layout_width="match_parent"
android:layout_height="wrap_content"
android:gravity="center"
android:text="Change font"
android:textSize="20sp" />
</LinearLayout>

```

9) Again click the graphics layout tab and screen layout is look like below

10) Go to project explorer and select *src* folder. Now select mainactivity.java file and type the following code.

PROGRAM

```
import android.R; import
android.app.Activity; import
android.graphics.Color; import
android.graphics.Typeface; import
android.os.Bundle; import
android.view.View; import
android.widget.Button; import
android.widget.TextView;
public class MainActivity extends Activity
{   float font =24;   int i=1;
    @Override   public void
onCreate(Bundle savedInstanceState) {
super.onCreate(savedInstanceState);
setContentView(R.layout.main);
    final TextView t1=(TextView)
findViewById(R.id.textView1);   Button
b1 = (Button) findViewById(R.id.button1);
    b1.setOnClickListener(new
View.OnClickListener() {
        public void onClick(View view) {
            t1.setTextSize(font);
font=font+4;           if(font==40)
font=20;
        }
    });
    Button b2 = (Button)
findViewById(R.id.button2);
b2.setOnClickListener(new
View.OnClickListener() {
```

```
public void onClick(View view) {
```

```
    switch(i)
```

```
    {        case 1:
```

```
        t1.setTextColor(Color.parseColor("#0000FF  
        "));        break;        case 2:
```

```
        t1.setTextColor(Color.parseColor("#00FF00  
        "));        break;        case 3:
```

```
        t1.setTextColor(Color.parseColor("#FF0000"));  
        break;        case 4:
```

```
        t1.setTextColor(Color.parseColor("#800000"));  
        break;
```

```
    }        i++;
```

```
    if(i==5)
```

```
    i=1;
```

```
    }
```

```
});
```

```
}}
```

11) Now go to main.xml and right click .select run as option and select run configuration

12) Android output is present in the android emulator as shown in below.

Ex. No : 2

To understand activity, Intent, Create sample application with login module.

- 1) Open eclipse or android studio and select new android project
- 2) Give project name and select next
- 3) Choose the android version. Choose the lowest android version (Android 2.2) and select next
- 4) Enter the package name. Package name must be two word separated by comma and click finish
- 5) Go to package explorer in the left hand side. select our project.
- 6) Go to res folder and select layout. Double click the main.xml file. Add the code below

<RelativeLayout

```
xmlns:android="http://schemas.android.com/apk/res/android"  
android:id="@+id/relativeLayout1"    android:layout_width="fill_parent"  
android:layout_height="fill_parent" >
```

<LinearLayout

```
    android:id="@+id/linearLayout1"  
android:layout_width="wrap_content"  
android:layout_height="wrap_content"  
android:layout_alignParentLeft="true"  
android:layout_alignParentRight="true"  
android:layout_alignParentTop="true" >
```

<TextView

```
android:layout_width="wrap_content"  
android:layout_height="wrap_content"  
android:layout_gravity="center"  
android:text="ADDITION"  
android:textSize="20dp"
```

/TextView>

</LinearLayout><LinearLayout

android:id="@+id/linearLayout2"

android:layout_width="wrap_content"

android:layout_height="wrap_content"

android:layout_alignParentLeft="true"

android:layout_alignParentRight="true"

android:layout_below="@+id/linearLayout1" >

<TextView

android:layout_width="wrap_content"

android:layout_height="wrap_content"

android:text="ENTER NO 1" >

</TextView><EditText

android:layout_width="wrap_content"

android:layout_height="wrap_content"

android:layout_weight="0.20"

android:id="@+id/edittext1"

android:inputType="number">

</EditText>

</LinearLayout><LinearLayout

android:id="@+id/linearLayout3"

android:layout_width="wrap_content"

android:layout_height="wrap_content"

android:layout_alignParentLeft="true"

android:layout_alignParentRight="true"

android:layout_below="@+id/linearLayout2" >

<TextView

android:layout_width="wrap_content"

android:layout_height="wrap_content"

android:text="ENTER NO 2" >

</TextView><EditText

android:layout_width="wrap_content"

```
android:layout_height="wrap_content"
android:layout_weight="0.20"
android:id="@+id/edittext2"
android:inputType="number">
</EditText>
</LinearLayout><LinearLayout
android:id="@+id/linearLayout4"
android:layout_width="wrap_content"
android:layout_height="wrap_content"
android:layout_alignParentLeft="true"
android:layout_alignParentRight="true"
    android:layout_below="@+id/linearLayout3" >
```

```
<Button
android:layout_width="wrap_content"
android:id="@+id/button1"
android:layout_height="wrap_content"
android:text="Addition"
android:layout_weight="0.50" />
```

```
<Button
android:layout_width="wrap_content"
android:id="@+id/button3"
android:layout_height="wrap_content"
android:text="subtraction"
android:layout_weight="0.50" />
```

```
<Button
android:layout_width="wrap_content"
android:id="@+id/button2"
android:layout_height="wrap_content"
android:text="CLEAR"
android:layout_weight="0.50" />
</LinearLayout>
```

```

<View
    android:layout_height="2px"
    android:layout_width="fill_parent"
    android:layout_below="@+id/linearLayout4"
    android:background="#DDFFDD"/>
</RelativeLayout>

```

7) Now select mainactivity.java file and type the following code.

```

package layout.ne;
import android.app.Activity;
import android.os.Bundle;
import android.view.View;
import
    android.view.View.OnClickListener;
import android.widget.Button; import
    android.widget.EditText; import
    android.widget.Toast;

public class LAYOUTActivity
    extends Activity {
    /** Called when the activity is first created. */ EditText
    txtData1,txtData2; float num1,num2,result1,result2;
    @Override
    public void onCreate(Bundle
    savedInstanceState) {
    super.onCreate(savedInstanceState);

    setContentView(R.layout.main);

    Button add = (Button)
    findViewById(R.id.button1);
    add.setOnClickListener(new
    OnClickListener() {    public
    void onClick(View v) {
    try

```

```

        {
            txtData1 = (EditText)
findViewById(R.id.edittext1);
txtData2 = (EditText)
findViewById(R.id.edittext2);
num1 =
Float.parseFloat(txtData1.getTe
xt().toString());          num2
=
Float.parseFloat(txtData2.getTe
xt().toString());
result1=num1+num2;

Toast.makeText(getBaseContext(),"ANSWER:"+result1,Toast.LENGTH_SHORT).show();
}
catch(Exception e)
{
    Toast.makeText(getBaseContext(), e.getMessage(),
        Toast.LENGTH_SHORT).show();
}
});

Button sub = (Button) findViewById(R.id.button3);
sub.setOnClickListener(new OnClickListener() {

    public void onClick(View v) {
try
    {

```

```

txtData1 = (EditText) findViewById(R.id.edittext1);
txtData2 = (EditText) findViewById(R.id.edittext2);          num1 =
Float.parseFloat(txtData1.getText().toString());          num2 =
Float.parseFloat(txtData2.getText().toString());
result2=num1-num2;

Toast.makeText(getBaseContext(),"ANSWER:"+result2,Toast.LENGTH_SHORT).show();
    }
catch(Exception e)
    {
        Toast.makeText(getBaseContext(), e.getMessage(),
            Toast.LENGTH_SHORT).show();
    }
}
});

Button clear = (Button) findViewById(R.id.button2);
clear.setOnClickListener(new OnClickListener() {

    public void onClick(View v) {
try
    {
        txtData1.setText("");
txtData2.setText("");
    }
catch(Exception e)
    {
        Toast.makeText(getBaseContext(), e.getMessage(),
            Toast.LENGTH_SHORT).show();
    }
}
});
}}

```

- 8) Now go to main.xml and right click .select run as option and select run configuration
- 9) Android output is present in the android emulator as shown in below.

Ex.No : 3

Design simple GUI application with activity and Intents e. g. calculator.

- 1) Open eclipse or android studio and select new android project
- 2) Give project name and select next
- 3) Choose the android version. Choose the lowest android version(Android 2.2) and select next
- 4) Enter the package name. package name must be two word separated by comma and click finish
- 5) Go to package explorer in the left hand side. select our project.
- 6) Go to res folder and select layout. Double click the main.xml file. Add the code below

Main.xml coding

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout
xmlns:android="http://schemas.android.com/apk/res/android"
android:orientation="vertical"
android:layout_width="fill_parent"
android:layout_height="fill_parent">
  <LinearLayout android:layout_width="match_parent"
android:layout_height="wrap_content"
android:id="@+id/linearLayout1"
android:layout_marginLeft="10pt"
android:layout_marginRight="10pt"
android:layout_marginTop="3pt">
    <EditText android:layout_weight="1"
android:layout_height="wrap_content"
android:layout_marginRight="5pt"
android:id="@+id/etNum1"
android:layout_width="match_parent"
android:inputType="numberDecimal">
```

```
</EditText><EditText
android:layout_height="wrap_content"
android:layout_weight="1"
android:layout_marginLeft="5pt"
android:id="@+id/etNum2"
android:layout_width="match_parent"
android:inputType="numberDecimal">
</EditText>
</LinearLayout><LinearLayout
android:layout_width="match_parent"
android:layout_height="wrap_content"
android:id="@+id/linearLayout2"
android:layout_marginTop="3pt"
android:layout_marginLeft="5pt"
android:layout_marginRight="5pt">
<Button android:layout_height="wrap_content" android:layout_width="match_parent"
android:layout_weight="1" android:text="+"
android:textSize="15pt"
android:id="@+id/btnAdd">
</Button><Button
android:layout_height="wrap_content"
android:layout_width="match_parent"
android:layout_weight="1" android:text="-"
android:textSize="15pt" android:id="@+id/btnSub">
</Button><Button
android:layout_height="wrap_content"
android:layout_width="match_parent"
android:layout_weight="1" android:text="*"
android:textSize="15pt" android:id="@+id/btnMult">
</Button><Button
android:layout_height="wrap_content"
android:layout_width="match_parent"
```

```

android:layout_weight="1" android:text="/"
android:textSize="15pt"
android:id="@+id/btnDiv"></Button>
</LinearLayout><TextView
android:layout_height="wrap_content"
android:layout_width="match_parent"
android:layout_marginLeft="5pt"
android:layout_marginRight="5pt"
android:textSize="12pt"
android:layout_marginTop="3pt"
android:id="@+id/tvResult"
android:gravity="center_horizontal">
</TextView>
</LinearLayout>

```

7) Now select mainactivity.java file and type the following code. package

```

MainActivity.java coding package CALCU.CALU;
import android.app.Activity;
import android.os.Bundle;
import android.text.TextUtils;
import android.view.View;
import
android.view.View.OnClickListener;
import android.widget.Button; import
android.widget.EditText; import
android.widget.TextView;

public class CALCULATORActivity extends Activity implements OnClickListener
{ EditText input1;
EditText input2;

Button addition;
Button subtraction;

Button multiplication;
Button division;

```

TextView tvResult;

String oper = "";

@Override

public void onCreate(Bundle savedInstanceState) {

super.onCreate(savedInstanceState);

setContentView(R.layout.main); input1 =

(EditText) findViewById(R.id.etNum1); input2

= (EditText) findViewById(R.id.etNum2);

addition = (Button) findViewById(R.id.btnAdd);

subtraction = (Button) findViewById(R.id.btnSub);

multiplication = (Button) findViewById(R.id.btnMult);

division = (Button) findViewById(R.id.btnDiv);

tvResult = (TextView) findViewById(R.id.tvResult);

// set a listener

addition.setOnClickListener(this);

subtraction.setOnClickListener(this);

multiplication.setOnClickListener(this);

division.setOnClickListener(this);

}

@Override

public void onClick(View v) { // TODO Auto-generated method stub

float num1 = 0; float num2 = 0;

float result = 0;

```

// check if the fields are empty    if
(TextUtils.isEmpty(input1.getText().toString())
// TextUtils.isEmpty(input2.getText().toString())) {
return;    }

// read EditText and fill variables with numbers
num1 =
Float.parseFloat(input1.getText().toString());
num2 =
Float.parseFloat(input2.getText().toString());

// defines the button that has been clicked and performs the corresponding operation
// write operation into oper, we will use it later for
output    switch (v.getId()) {    case R.id.btnAdd:
oper = "+";    result
= num1 + num2;
break; case
R.id.btnSub:
oper = "-";    result
= num1 - num2;
break; case
R.id.btnMult:
oper = "*";    result
= num1 * num2;
break; case
R.id.btnDiv:
oper = "/";    result
= num1 / num2;
break; default:
break;
}
}

```

/form the output line

```
tvResult.setText(num1 + " " + oper + " " + num2 + " = " + result);
```

```
}
```

```
}
```

8) Android output is present in the android emulator as Shown in below

Ex. No : 4

WRITE AN APPLICATION THAT DRAWS BASIC GRAPHICAL PRIMITIVES ON THE SCREEN IN ANDROID

- 1) Open eclipse or android studio and select new android project
- 2) Give project name and select next
- 3) Choose the android version. Choose the lowest android version(Android 2.2) and select next
- 4) Enter the package name. package name must be two word separated by comma and click finish
- 5) Go to package explorer in the left hand side. select our project.
- 6) Go to res folder and select layout. Double click the main.xml file. Don't change anything in layout. Leave as default.
- 7) Now select mainactivity.java file and type the following code.

```
package Basic.primitive;  
import  
android.app.Activity;  
import  
android.content.Context;  
import  
android.graphics.Canvas  
; import  
android.graphics.Color;  
import  
android.graphics.Paint;  
import  
android.os.Bundle;  
import  
android.view.View;
```

```

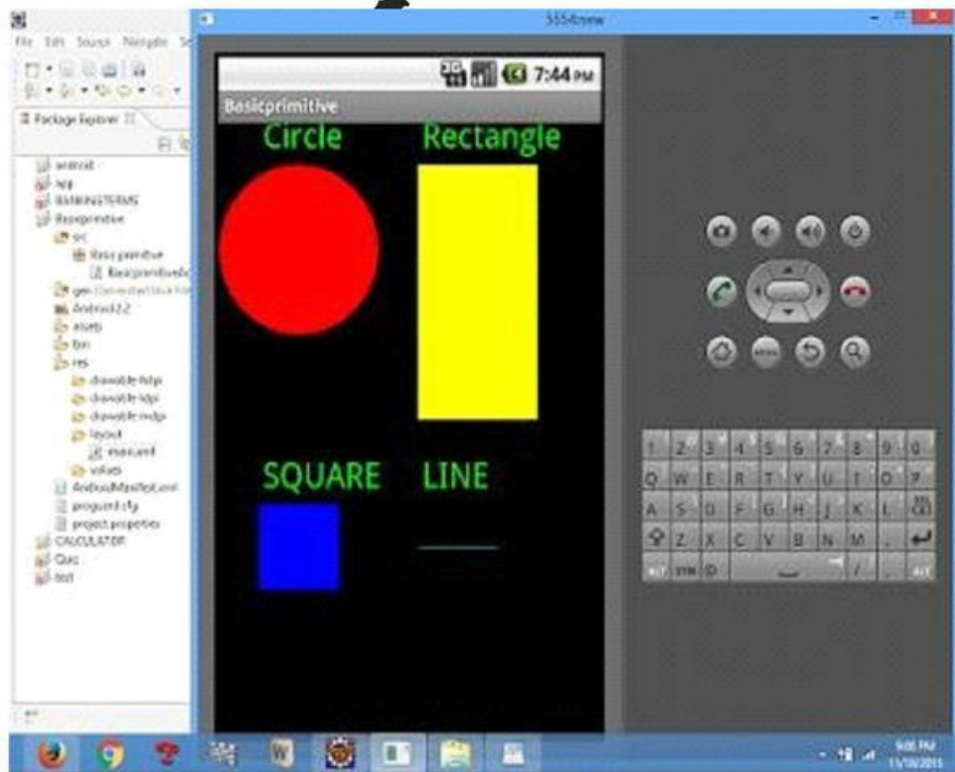

public class BasicprimitiveActivity extends Activity {
/** Called when the activity is first created. */
@Override
public void onCreate(Bundle savedInstanceState) {
super.onCreate(savedInstanceState);
setContentView(new myview(this));
}
private class myview extends View
{
public myview(Context context)
{
super(context);
}
@Override

protected void onDraw(Canvas canvas)
{
super.onDraw(canvas);      Paint
paint=new Paint();
paint.setTextSize(40);
paint.setColor(Color.GREEN);
canvas.drawText("Circle", 55, 30,
paint);
paint.setColor(Color.RED);
canvas.drawCircle(100, 150,100, paint);
paint.setColor(Color.GREEN);
canvas.drawText("Rectangle", 255, 30, paint);
paint.setColor(Color.YELLOW);      canvas.drawRect(250,
50,400,350, paint);      paint.setColor(Color.GREEN);
canvas.drawText("SQUARE", 55, 430, paint);
paint.setColor(Color.BLUE);      canvas.drawRect(50,
450,150,550, paint);      paint.setColor(Color.GREEN);

canvas.drawText("LINE", 255, 430, paint);
paint.setColor(Color.CYAN);
      canvas.drawLine(250, 500, 350, 500, paint);

```

- }
- }
- }
- 8) Now go to main.xml and right click .select run as option and select run configuration
- 9) Android output is present in the android emulator as shown in below.

Ex.No : 5

Create an android app for database creation using SQLite database.

- 1) Open eclipse or android studio and select new android project
- 2) Give project name and select next
- 3) Choose the android version. Choose the lowest android version (Android 2.2) and select next
- 4) Enter the package name. package name must be two word separated by comma and click finish
- 5) Go to package explorer in the left hand side. select our project.
- 6) Go to res folder and select layout. Double click the main.xml file. Add the code below

```
<?xml version="1.0" encoding="utf-8"?>
<AbsoluteLayout
xmlns:android="http://schemas.android.com/apk/res/android"
android:id="@+id/myLayout" android:stretchColumns="0"
android:layout_width="fill_parent"
android:layout_height="fill_parent"><TextView
android:text="@string/title" android:layout_x="110dp"
android:layout_y="10dp"
android:layout_width="wrap_content"
android:layout_height="wrap_content"/><TextView
android:text="@string/empid"
android:layout_x="30dp"
android:layout_y="50dp"
android:layout_width="wrap_content"
android:layout_height="wrap_content"/><EditTe
xt android:id="@+id/editEmpid"
android:inputType="number"
android:layout_x="150dp"
android:layout_y="50dp"
```

```
android:layout_width="150dp"
android:layout_height="40dp"/><TextView
android:text="@string/name"
android:layout_x="30dp"
android:layout_y="100dp"
android:layout_width="wrap_content"
android:layout_height="wrap_content"/><EditTe
xt android:id="@+id/editName"
android:inputType="text"
android:layout_x="150dp"
android:layout_y="100dp"
android:layout_width="150dp"
android:layout_height="40dp"/><TextView
android:text="@string/salary"
    android:layout_x="30dp"
android:layout_y="150dp"
android:layout_width="wrap_content"
android:layout_height="wrap_content"/><EditText
android:id="@+id/editsalary"
android:inputType="number"
android:layout_x="150dp"
android:layout_y="150dp"
android:layout_width="150dp"
android:layout_height="40dp"/><Button
android:id="@+id/btnAdd"
android:text="@string/add"
android:layout_x="30dp"
android:layout_y="200dp"
android:layout_width="130dp"
android:layout_height="40dp"/><Button
android:id="@+id/btnDelete"
android:text="@string/delete"
```

```

android:layout_x="160dp"
android:layout_y="200dp"
android:layout_width="130dp"
android:layout_height="40dp"/>n <Button
android:id="@+id/btnModify"
android:text="@string/modify"
android:layout_x="30dp"
android:layout_y="250dp"
android:layout_width="130dp"
android:layout_height="40dp"/><Button
android:id="@+id/btnView"
android:text="@string/view"
android:layout_x="160dp"
android:layout_y="250dp"
android:layout_width="130dp"
android:layout_height="40dp"/><Button
android:id="@+id/btnViewAll"
android:text="@string/view_all"
android:layout_x="85dp"
android:layout_y="300dp"
android:layout_width="150dp"
android:layout_height="40dp"/>

```

</AbsoluteLayout>

7)Go to values folder and select string.xml file. Replace the code below

```

<?xml version="1.0" encoding="utf-8"?>
<resources>

<string name="app_name">Employee detail</string>
<string name="hello">Hello World, Employee detail
Activity!</string><string name="title">Employee Details</string>
<string name="empid">Enter Employee ID: </string>

<string name="name">Enter Name: </string>
<string name="salary">Enter salary: </string>
<string name="add">Add Employee</string>

```

```
<string name="delete">Delete Employee</string>
<string name="modify">Modify Employee</string>
<string name="view">View Employee</string>
<string name="view_all">View All Employee</string>
</resources>
```

8) Now select mainactivity.java file and type the following code. In my coding mainactivity name is EmployeeDetailActivity.

```
package employee.detail;
//import android.R; import android.app.Activity; import
android.app.AlertDialog.Builder; import android.content.Context; import
android.database.Cursor; import
android.database.sqlite.SQLiteDatabase;
import android.os.Bundle; import
android.view.View;
import
android.view.View.OnClickListener;
import android.widget.Button; import
android.widget.EditText;

public class EmployeeDetailActivity extends Activity implements OnClickListener
{ EditText editEmpid,editName,editSalary;
Button btnAdd,btnDelete,btnModify,btnView,btnViewAll;
SQLiteDatabase db;
/** Called when the activity is first created. */
@Override
public void onCreate(Bundle savedInstanceState)
{
```

```

super.onCreate(savedInstanceState);
setContentViews(R.layout.main);
editEmpid=(EditText)findViewById(R.id.editEmpid);
editName=(EditText)findViewById(R.id.editName);
editsalary=(EditText)findViewById(R.id.editsalary);
btnAdd=(Button)findViewById(R.id.btnAdd);
btnDelete=(Button)findViewById(R.id.btnDelete);
btnModify=(Button)findViewById(R.id.btnModify);
btnView=(Button)findViewById(R.id.btnView);
btnViewAll=(Button)findViewById(R.id.btnViewAll);
btnAdd.setOnClickListener(this);
btnDelete.setOnClickListener(this);
btnModify.setOnClickListener(this);
btnView.setOnClickListener(this);
btnViewAll.setOnClickListener(this);
db=openOrCreateDatabase("EmployeeDB", Context.MODE_PRIVATE, null);
db.execSQL("CREATE TABLE IF NOT EXISTS employee(empid VARCHAR,name
VARCHAR,salary VARCHAR);");
}
public void onClick(View view)
{
if(view==btnAdd)
{
if(editEmpid.getText().toString().trim().length()==0||
editName.getText().toString().trim().length()==0||
editsalary.getText().toString().trim().length()==0)
{
showMessage("Error", "Please enter all values");
return;
}
db.execSQL("INSERT INTO employee
VALUES('"+editEmpid.getText()+"','"+editName.getText()+
"+','"+editsalary.getText()+"');");
showMessage("Success", "Record added");
clearText();
}
}

```

```

}
if(view==btnDelete)
{
if(editEmpid.getText().toString().trim().length()==0)
{
showMessage("Error", "Please enter Employee id");
return;
}

}

```

7) Now go to main.xml and right click .select run as option and select run configuration

8) Android output is present in the android emulator as shown in below.

Ex. No : 6

DEVELOP AN APPLICATION THAT MAKES USE OF RSS FEED

- 1) Open eclipse or android studio and select new android project
- 2) Give project name and select next
- 3) Choose the android version. Choose the lowest android version (Android 2.2) and select next
- 4) Enter the package name. Package name must be two word separated by comma and click finish
- 5) Go to package explorer in the left hand side. Select our project.
- 6) Go to res folder and select layout. Double click the main.xml file
- 7) Now you can see the Graphics layout window.

- 8) Click the main.xml file and type the code below

Code:

```
<?xml version="1.0" encoding="utf-8"?>
```

```
<LinearLayout
```

```
xmlns:android="http://schemas.android.com/apk/res/android"
```

```
android:layout_width="fill_parent" android:layout_height="fill_parent"
```

```
android:orientation="vertical" >
```

```
<TextView
```

```
android:id="@+id/textView1"
```

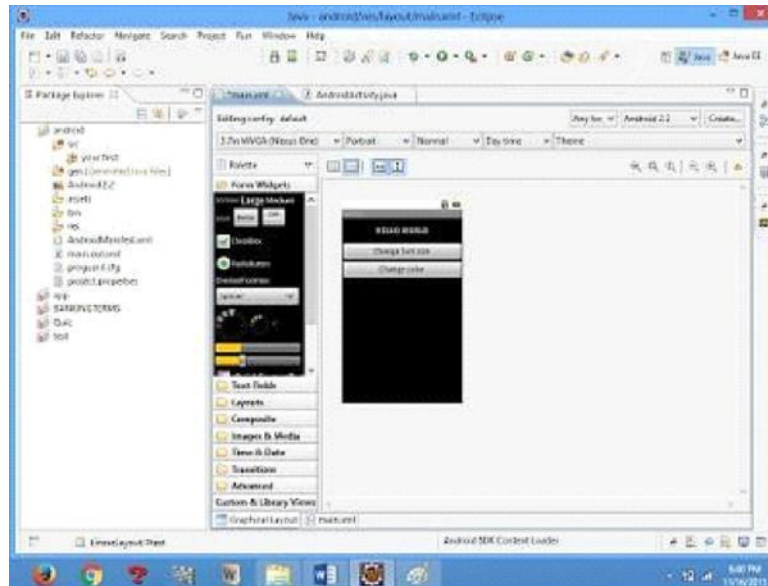

```
android:layout_width="match_parent"
```

```
android:layout_height="wrap_content"
```

```
android:layout_margin="20sp"
android:gravity="center"
android:text="HELLO WORLD"
android:textSize="20sp"
android:textStyle="bold" />
<Button
    android:id="@+id/button1"
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:gravity="center"
    android:text="Change font size"
    android:textSize="20sp" />
<Button
    android:id="@+id/button2"
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:gravity="center"
    android:text="Change color"
    android:textSize="20sp" />
<Button
    android:id="@+id/button3"
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:gravity="center"
    android:text="Change font"
    android:textSize="20sp" />
```

</LinearLayout>

9) Again click the graphics layout tab and screen layout is look like below

10) Go to project explorer and select *src* folder. Now select mainactivity.java file and type the following code.

PROGRAM

```
import android.R; import
android.app.Activity; import
android.graphics.Color; import
android.graphics.Typeface; import
android.os.Bundle; import
android.view.View; import
android.widget.Button; import
android.widget.TextView;
public class MainActivity extends Activity {    Float
font =24;    int i=1;

    @Override    public void onCreate(Bundle
savedInstanceState) {
super.onCreate(savedInstanceState);    setContentView(R.layout.main);
```

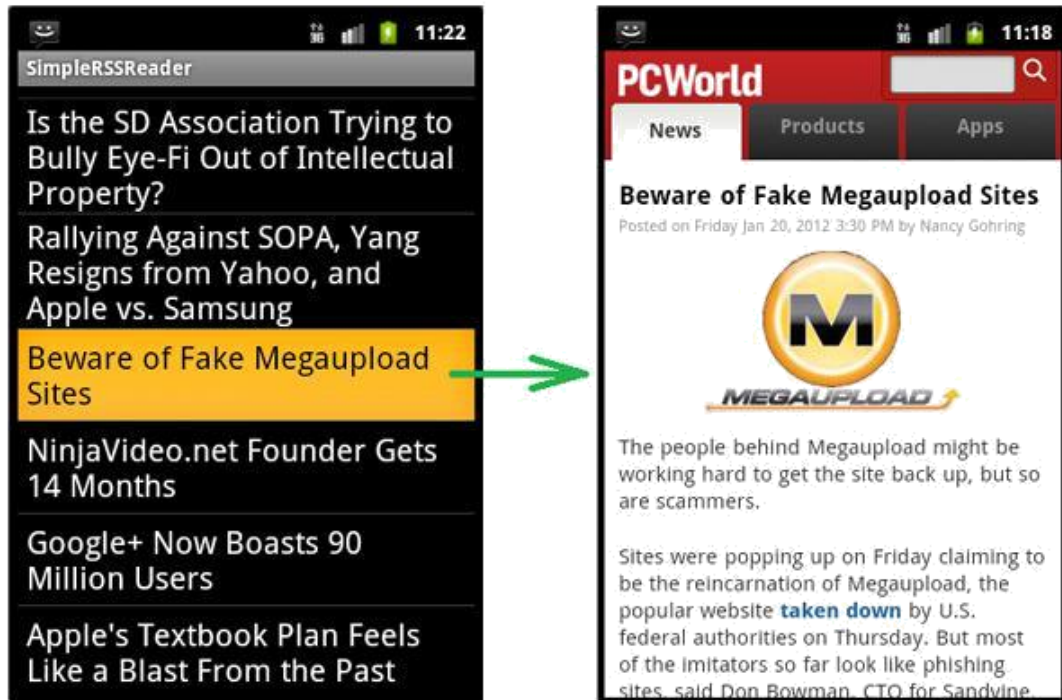

```

    final TextView t1=(TextView) findViewById(R.id.textView1);    Button b1
= (Button) findViewById(R.id.button1);
    b1.setOnClickListener(new View.OnClickListener() {
        public void onClick(View view) {
            t1.setTextSize(font);
font=font+4;        if(font==40)
font=20;
        }
    });
Button b2 = (Button) findViewById(R.id.button2);
b2.setOnClickListener(new View.OnClickListener() {
    public void onClick(View view) {
switch(i)
{
    case 1:
        t1.setTextColor(Color.parseColor("#0000FF"));
break;
    case 2:
        t1.setTextColor(Color.parseColor("#00FF00"));
break;
    case 3:
        t1.setTextColor(Color.parseColor("#FF0000"));
break;
    case 4:
t1.setTextColor(Color.parseColor("#800000"));
break;
}
        i++;
if(i==5)
i=1;
    }
});

}}

```

8) Now go to main.xml and right click .select run as option and select run configuration

DEVELOP A NATIVE APPLICATION THAT USES GPS LOCATION INFORMATION

- 1) Open eclipse or android studio and select new android project
- 2) Give project name and select next
- 3) Choose the android version. Choose the lowest android version (Android 2.2) and select next
- 4) Enter the package name. package name must be two word separated by comma and click finish
- 5) Go to package explorer in the left hand side. select our project.
- 6) Go to res folder and select layout. Double click the main.xml file. Add the code below

```
<?xml version="1.0" encoding="utf-8"?>  
<RelativeLayout  
xmlns:android="http://schemas.android.com/apk/res/android"  
android:id="@+id/relativeLayout1"  
android:layout_width="match_parent"  
android:layout_height="match_parent" >  
<Button  
android:id="@+id/show_Location  
"  
android:layout_width="wrap_cont  
ent"  
android:layout_height="wrap_cont  
ent  
android:text="Show_Location"  
android:layout_centerVertical="tr  
ue"
```

```
android:layout_centerHorizontal="true"  
/>  
</RelativeLayout>
```

7) Now select mainactivity.java file and type the following code. In my coding man activity name is GPSlocation Activity. Package gps.location;

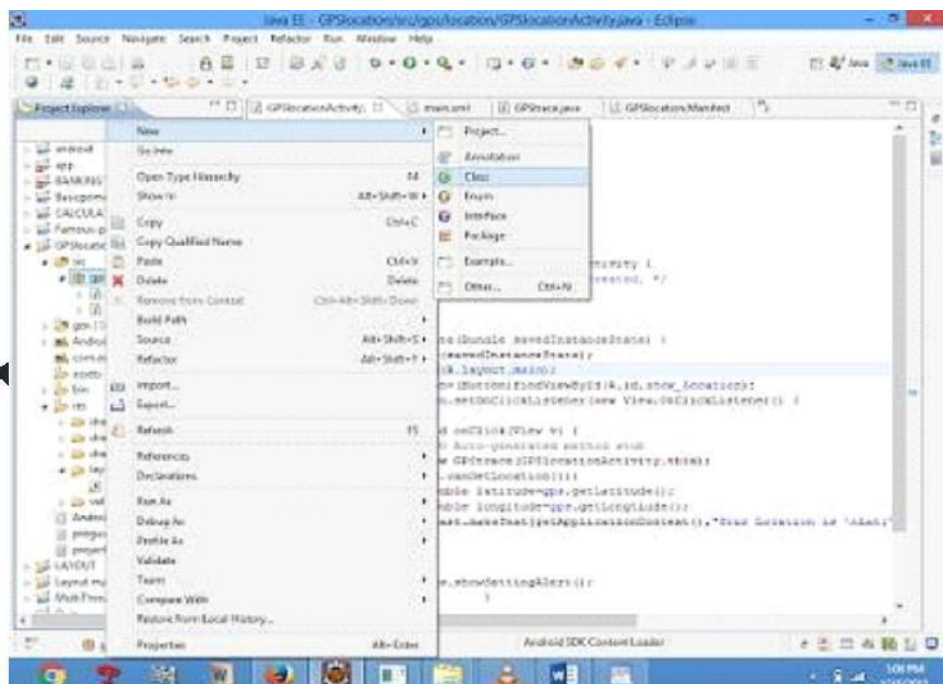

```
//import android.R;  
import  
android.app.Activity;  
import  
android.os.Bundle;  
import  
android.view.View;  
import  
android.widget.Button;  
import  
android.widget.Toast  
;  
  
public class GPSlocationActivity extends Activity {  
/** Called when the activity is first created. */  
Button btnShowLocation;  
GPSTrace gps;  
@Override  
public void onCreate(Bundle savedInstanceState) {  
super.onCreate(savedInstanceState);  
setContentView(R.layout.main);  
btnShowLocation=(Button)findViewById(R.id.show_Location);  
btnShowLocation.setOnClickListener(new View.OnClickListener() {  
@Override  
public void onClick(View v) {
```

```

// TODO Auto-generated method stub
gps=new GPSTrace(GPSlocationActivity.this);
if(gps.canGetLocation()){
double latitude=gps.getLatitude(); double longitude=gps.getLongiude();
Toast.makeText(getApplicationContext(),"Your Location is
\nLat:''+latitude+''\nLong:''+longitude,
Toast.LENGTH_LONG).show();
}
else
{
gps.showSettingAlert();
}
}
});
}
}
}
}

```

8) Go to src folder and Right Click on your package folder and choose new class and give the class names as GPS trace

9) Select the GPSTrace.java file and paste the following code.

```
Package gps.location;  
import android.app.AlertDialog;  
import android.app.Service;  
import android.content.Context;  
import  
android.content.DialogInterface;  
import android.content.Intent;  
import android.location.Location;  
import  
android.location.LocationListener  
; import  
android.location.LocationManage  
r; import android.os.Bundle;  
import android.os.IBinder; import  
android.provider.Settings;  
  
public class GPSTrace extends Service implements

}

}

10)Go to manifest.xml file and add the code below

<uses-permission

android:name="android.permission.ACCESS_FINE_LOCATION"/>

<uses-permission

android:name="android.permission.INTERNET"/>

11) Now go to main.xml and right click .select run as option and select run configuration

12) Android output is present in the android emulator as shown in below.

Ex.No : 8

IMPLEMENT AN APPLICATION THAT WRITES DATA TO THE SD CARD

- 1) Open eclipse or android studio and select new android project
- 2) Give project name and select next
- 3) Choose the android version. Choose the lowest android version (Android 2.2) and select next
- 4) Enter the package name. Package name must be two word separated by comma and click finish
- 5) Go to package explorer in the left hand side. Select our project.
- 6) Go to res folder and select layout. Double click the main.xml file. Add the code below

```
<?xml version="1.0" encoding="utf-8"?> <LinearLayout  
xmlns:android="http://schemas.android.com/apk/res/android"  
android:layout_width="fill_parent"  
android:layout_height="fill_parent"  
android:background="#ff0000ff" android:orientation="vertical" >  
<EditText  
  
android:id="@+id/editText1"  
android:layout_width="match_parent"  
android:layout_height="wrap_content"  
> <requestFocus />  
</EditText>  
<Button  
android:id="@+id/button1"  
android:layout_width="match_parent"  
android:layout_height="wrap_content"  
android:text="SAVE DATA" /> <Button
```

```

android:id="@+id/button2"
android:layout_width="match_parent"
android:layout_height="wrap_content"
android:text="SHOW DATA" />
<TextView
android:id="@+id/textView1"
android:layout_width="wrap_content"
android:layout_height="wrap_content"
/>
</LinearLayout>

```

7) Now select *mainactivity.java* file and type the following code. package *save.sd*;

```

import java.io.File; import
java.io.FileInputStream; import
java.io.FileNotFoundException;
import java.io.FileOutputStream;
import java.io.IOException; import
java.io.InputStreamReader; import
java.io.OutputStreamWriter; import
android.app.Activity; import
android.os.Bundle; import
android.os.Environment; import
android.view.View; import
android.widget.Button; import
android.widget.EditText; import
android.widget.TextView; import
android.widget.Toast;
public class SavedatasdcardActivity extends Activity
{ /** Called when the activity is first created. */
Button save,load;
EditText message;
TextView t1;

```

String Message1;

@Override

```
public void onCreate(Bundle savedInstanceState) {  
super.onCreate(savedInstanceState);  
setContentView(R.layout.main); save=(Button)  
findViewById(R.id.button1); load=(Button)  
findViewById(R.id.button2); message=(EditText)  
findViewById(R.id.editText1); t1=(TextView)  
findViewById(R.id.textView1);  
save.setOnClickListener(new View.OnClickListener(){  
public void onClick(View v){  
//Get message from user store in message1 variable  
Message1 =message.getText().toString(); try{  
//Create a new folder called MyDirectory in SDCard  
File sdcard=Environment.getExternalStorageDirectory();  
File directory=new File(sdcard.getAbsolutePath()+"/MyDirectory");  
directory.mkdirs();  
//Create a new file name textfile.txt inside MyDirectory  
File file=new File(directory,"textfile.txt"); //Create File  
OutputStream to read the file FileOutputStream fou=new  
FileOutputStream(file); OutputStreamWriter osw=new  
OutputStreamWriter(fou); try{  
  
//write a user data to file  
osw.append(Message1);  
osw.flush();  
osw.close();  
Toast.makeText(getBaseContext(),"Data  
Saved",Toast.LENGTH_LONG).show();  
  
}catch(IOException e){  
e.printStackTrace();
```

```

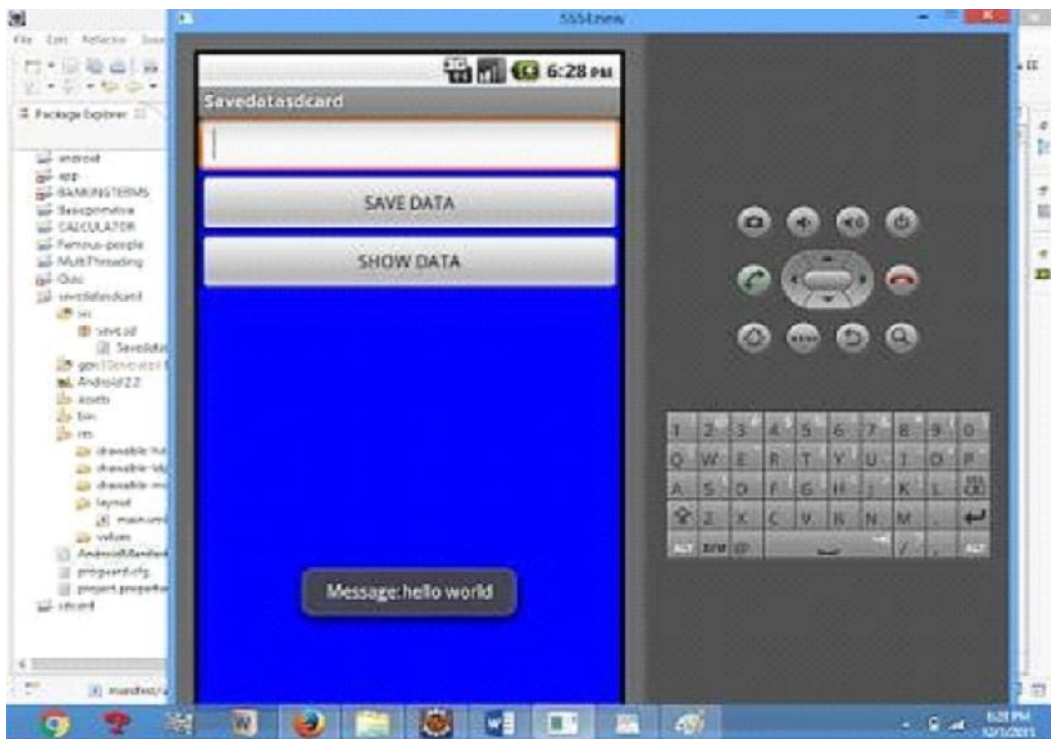

}
}catch (FileNotFoundException e){
    e.printStackTrace();
}
}
});
load.setOnClickListener(new View.OnClickListener(){
    public void onClick(View v){
        try{
            File sdcard=Environment.getExternalStorageDirectory();
            File directory=new File(sdcard.getAbsolutePath()+"/MyDirectory");
            File file=new File(directory,"textfile.txt");
            FileInputStream fis=new FileInputStream(file);
            InputStreamReader isr=new InputStreamReader(fis);
            char[] data=new char[100];
            String final_data="";
            int size;
            try{
                while((size=isr.read(data))>0)
                {
                    //read a data from file
                    String read_data=String.valueOf(data,0,size);
                    final_data+=read_data;
                    data=new char[100];
                }
                //display the data in output

                Toast.makeText(getApplicationContext(),"Message:"+final_data,Toast.LENGTH_LONG).show()
                ;
            }catch(IOException e){
                e.printStackTrace();
            }
        }
    }
}

```

```
}catch (FileNotFoundException e){  
    e.printStackTrace();  
}  
}  
});  
}  
}
```

- 8) Next step is to set permission to write data in sd card. So go to AndroidManifest.xml file. Copy and paste the following coding. The code should come before <application> tab.
<uses-permission
 android:name="android.permission.WRITE_EXTERNAL_STORAGE"></uses-permission>
- 9) Now go to main.xml and right click .select run as option and select run configuration
- 10) Android output is present in the android emulator as shown in below.

DESIGN A GAMING APPLICATION

- 1) Open eclipse or android studio and select new android project
- 2) Give project name and select next
- 3) Choose the android version. Choose the lowest android version(Android 2.2) and select next
- 4) Enter the package name. package name must be two word separated by comma and click finish
- 5) Go to package explorer in the left hand side. select our project.
- 6) Go to res folder and select layout. Double click the main.xml file. Add the code below

```
<ScrollView
xmlns:android="http://schemas.android.com/apk/res/android"
android:layout_width="fill_parent"
android:layout_height="wrap_content"
android:scrollbars="vertical" >
<TableLayout
android:layout_width="match_parent"
android:layout_height="wrap_content"
android:shrinkColumns="*"
android:stretchColumns="*"
android:background="#000000">
<TableRow
android:layout_height="wrap_content"
android:layout_width="match_parent"
android:gravity="center_horizontal">
<TextView
    android:id="@+id/Title"
    android:layout_width="fill_parent"
    android:layout_height="wrap_content"

    android:layout_margin="5px"
    android:focusable="false"
    android:focusableInTouchMode="false"
    android:gravity="center_vertical|center_hori
zontal"    android:text="QUIZ"
    android:textSize="25sp"
    android:textStyle="bold" />
```

<View

android:layout_height="2px"

android:layout_marginTop="5dip"

android:layout_marginBottom="5dip"

android:background="#DDFFDD"/>

</TableRow>

<TableRow

android:layout_height="wrap_content"

android:layout_width="match_parent"

android:gravity="center_horizontal">

        android:id="@+id/submit"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:gravity="center"
        android:text="Submit" />
</TableRow>
</TableLayout></ScrollView>

```

- 7) Now select mainactivity.java file and type the following code. In my coding man activity name is Alert1Activity.
- 8) Now go to main.xml and right click .select run as option and select run configuration
- 9) Android output is present in the android emulator as shown in below.

WRITE A MOBILE APPLICATION THAT CREATES ALARM CLOCK

1. Android Manifest AndroidManifest.xml

We need to give uses-permission for WAKE_LOCK, other than that the AndroidManifest.xml is pretty standard one. Just need to include the service and receiver.

```
<?xml version="1.0" encoding="utf-8"?>
<manifest xmlns:android="http://schemas.android.com/apk/res/android"
package="com.javapapers.androidalarmclock"> <uses-permission
android:name="android.permission.WAKE_LOCK" /> <application
android:allowBackup="true"    android:icon="@drawable/ic_launcher"
android:label="@string/app_name" android:theme="@style/AppTheme">
<activity
android:name=".AlarmActivity" android:label="@string/app_name">
<intent-filter>
<action android:name="android.intent.action.MAIN" />
<category android:name="android.intent.category.LAUNCHER" />
</intent-filter>
</activity><service
android:name=".AlarmService" android:enabled="true" />
<receiver android:name=".AlarmReceiver" /> </application>

</manifest>
```

2. Android Activity

activity_my.xml

The Android Activity is designed to be simple. We have a Time Picker component followed by a Toggle Button. That's it. Choose the time to set the alarm and toggle the switch to on. The alarm will work.

```
<RelativeLayout xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:tools="http://schemas.android.com/tools"    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:paddingLeft="@dimen/activity_horizontal_margin"
    android:paddingRight="@dimen/activity_horizontal_margin"
    android:paddingTop="@dimen/activity_vertical_margin"
    android:paddingBottom="@dimen/activity_vertical_margin"    tools:context=".MyActivity">
    <TimePicker
        android:layout_width="wrap_content"    android:layout_height="wrap_content"
        android:id="@+id/alarmTimePicker"    android:layout_alignParentTop="true"
        android:layout_centerHorizontal="true" />
    <ToggleButton
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"    android:text="Alarm
    On/Off"    android:id="@+id/alarmToggle"
        android:layout_centerHorizontal="true"
        android:layout_below="@+id/alarmTimePicker"
        android:onClick="onToggleClicked" />
    <TextView
        android:layout_width="wrap_content"    android:layout_height="wrap_content"
        android:textAppearance="?android:attr/textAppearanceLarge"
        android:text=""    android:id="@+id/alarmText"
        android:layout_alignParentBottom="true"
        android:layout_centerHorizontal="true"
        android:layout_marginTop="20dp"
        android:layout_below="@+id/alarmToggle" />
</RelativeLayout>
```

AlarmActivity.java

Alarm Activity uses the Alarm Manager to set the alarm and send notification on alarm trigger.

```
package com.javapapers.androidalarmclock;
import android.app.Activity; import
android.app.AlarmManager; import
android.app.PendingIntent; import
android.content.Intent; import
android.os.Bundle; import
android.util.Log; import
android.view.View; import
android.widget.TextView; import
android.widget.TimePicker; import
android.widget.ToggleButton;
import java.util.Calendar; public
class AlarmActivity extends Activity
{
AlarmManager alarmManager; private
PendingIntent pendingIntent; private
TimePicker alarmTimePicker; private
static AlarmActivity inst; private TextView
alarmTextView;
public static AlarmActivity instance() {
return inst; }
@Override
public void onStart() {
super.onStart(); inst =
this; }
@Override
protected void onCreate(Bundle savedInstanceState) {
super.onCreate(savedInstanceState); setContentView(R.layout.activity_my);

```

```

alarmTimePicker = (TimePicker) findViewById(R.id.alarmTimePicker);    alarmTextView
= (TextView) findViewById(R.id.alarmText);
ToggleButton alarmToggle = (ToggleButton) findViewById(R.id.alarmToggle);
alarmManager = (AlarmManager) getSystemService(ALARM_SERVICE);
}
public void onToggleClicked(View view) {    if
(((ToggleButton) view).isChecked()) {
Log.d("MyActivity", "Alarm On");
Calendar calendar = Calendar.getInstance();
calendar.set(Calendar.HOUR_OF_DAY,
alarmTimePicker.getCurrentHour());
calendar.set(Calendar.MINUTE, alarmTimePicker.getCurrentMinute());
Intent myIntent = new Intent(AlarmActivity.this, AlarmReceiver.class);
pendingIntent = PendingIntent.getBroadcast(AlarmActivity.this, 0, myIntent, 0);
alarmManager.set(AlarmManager.RTC, calendar.getTimeInMillis(), pendingIntent);
} else {
alarmManager.cancel(pendingIntent);    setAlarmText("");
Log.d("MyActivity", "Alarm Off");
} }
public void setAlarmText(String alarmText) {    alarmTextView.setText(alarmText);
}
}

```

3. Alarm Receiver

AlarmReceiver.java

this is the one that receives the alarm trigger on set time. From here we initiate different actions to notify the user as per our choice. I have given three type of notifications, first show a message to user in the activity UI, second play the alarm ringtone and third send an Android notification message. So this is the place to add enhancement for different types of user notifications.

```

package com.javapapers.androidalarmclock;

```

```

import android.app.Activity; import
android.content.ComponentName; import
android.content.Context; import
android.content.Intent; import
android.media.Ringtone; import
android.media.RingtoneManager; import
android.net.Uri;
import android.support.v4.content.WakefulBroadcastReceiver; public class
AlarmReceiver extends WakefulBroadcastReceiver { @Override

public void onReceive(final Context context, Intent intent) {
//this will update the UI with message AlarmActivity inst =
AlarmActivity.instance(); inst.setAlarmText("Alarm! Wake up!
Wake up!");

//this will sound the alarm tone
//this will sound the alarm once, if you wish to
//raise alarm in loop continuously then use MediaPlayer and setLooping(true)
Uri alarmUri =
RingtoneManager.getDefaultUri(RingtoneManager.TYPE_ALARM
); if (alarmUri == null) { alarmUri =
RingtoneManager.getDefaultUri(RingtoneManager.TYPE_NOTIFICATION); }

Ringtone ringtone = RingtoneManager.getRingtone(context, alarmUri); ringtone.play();

//this will send a notification message
ComponentName comp = new ComponentName(context.getPackageName(),
AlarmService.class.getName());
startWakefulService(context, (intent.setComponent(comp)));
setResultCode(Activity.RESULT_OK); }
}

```

4. Alarm Notification Message

AlarmService.java

The receiver will start the following Intent Service to send a standard notification to the user.

```
package com.javapapers.androidalarmclock;  
import android.app.IntentService; import  
android.app.NotificationManager; import  
android.app.PendingIntent; import  
android.content.Context; import  
android.content.Intent;  
import android.support.v4.app.NotificationCompat;  
import android.util.Log;  
  
public class AlarmService extends IntentService { private  
NotificationManager alarmNotificationManager;  
  
public AlarmService() {  
super("AlarmService"); }  
  
@Override  
public void onHandleIntent(Intent intent) { sendNotification("Wake Up! Wake  
Up!");  
}  
  
private void sendNotification(String msg) {  
Log.d("AlarmService", "Preparing to send notification...: " + msg);  
alarmNotificationManager = (NotificationManager) this  
.getSystemService(Context.NOTIFICATION_SERVICE);  
  
PendingIntent contentIntent = PendingIntent.getActivity(this, 0, new Intent(this,  
AlarmActivity.class), 0);  
  
NotificationCompat.Builder alarmNotificationBuilder = new  
NotificationCompat.Builder(
```

```
this.setContentTitle("Alarm").setSmallIcon(R.drawable.ic_launcher)  
.setStyle(new NotificationCompat.BigTextStyle().bigText(msg))  
.setContentText(msg);
```

```
alamNotificationBuilder.setContentIntent(contentIntent);  
alarmNotificationManager.notify(1,  
alamNotificationBuilder.build()); Log.d("AlarmService",  
"Notification sent."); }
```
